

Canonical Verification Audit Report: ISKONNECT Scholarship Engine (Group B Program Audits)

The ISKONNECT scholarship matching platform operates an automated engine designed to process student profile vectors against financial assistance programs across public, institutional, and private sectors¹. To eliminate false-positive recommendations that direct applicants to ineligible programs and false-negative omissions that suppress viable funding, this canonical audit establishes the verified ground truth for all Group B database records¹. Production database updates require deterministic verification: every eligibility parameter must be validated against Tier 1 primary evidence, mapped to explicit database columns, and reconciled with governing agency mandates¹. Where an official provider document or governing policy does not explicitly state a requirement, platform protocol mandates designating the field as NOT SPECIFIED IN OFFICIAL SOURCE rather than introducing unverified assumptions¹.

The data verification framework strictly adheres to a four-tiered authority hierarchy¹. Tier 1 (Highest Authority) comprises direct government agency web portals (.gov.ph), official provider portals, downloadable policy guidelines, CHED Memorandum Orders (CMOs), GSIS Policy and Procedural Guidelines (PPGs), DOST Administrative Orders, and official application portals¹. Tier 2 covers official announcements, press releases, and direct advisories published by scholarship secretariats¹. Tier 3 consists of trusted secondary sources, such as university scholarship office notices, which serve solely to locate primary documentation¹. Tier 4 comprises unverified aggregators, blogs, and student forums, which are permanently excluded from live database updates¹.

13. Matching Risks

- Income Parameter Misconfiguration: The live database export records max_income: 500000 for ID 17⁹. Applying a ₱500,000 income ceiling will incorrectly disqualify public school completers and ESC grantees who are automatically entitled to voucher subsidies regardless of household income⁵.
- Level Mismatch: Displaying this program to college undergraduate applicants misdirects candidates. The recommendation engine must enforce user.education_level == 'Senior High School'⁴.

Recommendation Engine Architecture

The completion of canonical audits across these Group B scholarship programs establishes a verified data foundation for the ISKONNECT scholarship matching platform¹. By replacing unverified aggregator claims with official primary agency mandates, the system prevents misdirection and ensures accurate recommendations for Filipino students¹.

The recommendation engine processes student profiles through a multi-stage deterministic pipeline¹:

The initial stage conducts hard temporal and level filtering¹. It verifies whether a student's education level and year level match scholarship.eligible_year_levels, enforces zero earned college units when scholarship.incoming_year_only is true (e.g., BPMSP TVET ID 77, OWWA CMWSP ID 87)²¹, and validates age restrictions (e.g., age under 21 for AFPEBSO ID 56)¹⁷.

The second stage evaluates quantitative eligibility criteria¹. It checks whether user.gwa >= scholarship.minimum_gwa (enforcing 80% for NCIP EAP ID 52 versus 85% for NCIP MBSP ID 53)¹⁴, confirms user.family_income <= scholarship.income_limit (e.g., ₱200,000 for DA ACEF ID 55 versus ₱2,000,000 for BPMSP ID 77)⁹, and validates specific salary caps (e.g., OFW parent monthly salary under USD \$1,000 for OWWA ODSP ID 86)²⁸.

The third stage validates sectoral requirements, affiliation status, and institutional parameters¹. It confirms tribal certifications (user.has_ncip_coc == true for NCIP ID 52 and 53)¹⁰, validates RSBSA agricultural registry status (user.is_rsbsa_dependent == true for DA ACEF ID 55)¹⁶, verifies active OWWA membership and casualty flags (user.parent_ofw_status IN ('Deceased', 'Incapacitated') for OWWA ELAP ID 124)³¹, and restricts institutional grants (such as AFPEBSO ID 56) to SUCs¹⁷.

Implementing these database updates and pipeline constraints aligns the live ISKONNECT database with canonical provider rules, eliminating matching errors and delivering reliable scholarship recommendations¹.
