

ISKONNECT Production Verification

Audit: Group C Foreign & International Scholarships

This canonical verification report provides an exhaustive, production-grade audit of eleven international and bilateral scholarship programs available to Filipino applicants¹. Developed for the automated scholarship matching platform ISKONNECT, this report establishes the immutable source of truth required for production database mutations and matching engine rule configurations¹.

Every parameter has been strictly validated against Tier 1 primary sources, including official government portals, governing diplomatic announcements, downloadable application guidebooks, and official program memoranda¹. In accordance with platform audit protocols, any parameter that is not explicitly mandated in governing primary documentation is designated strictly as NOT SPECIFIED IN OFFICIAL SOURCE to prevent matching engine distortion¹.

Strategic Recommendations for ISKONNECT Architecture

The integration of these international and bilateral scholarship parameters requires specific enhancements to the ISKONNECT multi-stage recommendation pipeline¹.

First, professional work experience validation must be added as a mandatory Stage 2 query constraint¹. Programs such as Australia Awards (ID 74), Fulbright-PhilSA (ID 90), and Chevening (ID 91) strictly require at least two years of post-graduation work experience²⁴. Without validating `user.work_experience_years >= 2`, undergraduate seniors and fresh graduates will receive false-positive recommendations, leading to immediate disqualification during agency eligibility screening¹.

Second, foreign GPA conversion routines must be standardized within the recommendation logic¹. Global Korea Scholarship tracks (IDs 64 & 65) mandate a minimum cumulative grade point average of 80% or placement in the top 20% of the class¹⁹. The engine must normalize Philippine General Weighted Average (GWA) values—where 1.0 represents the highest score and 3.0 represents passing—into standard NIED percentile equivalents to prevent false-negative omissions of eligible top-tier Filipino students¹.

Third, temporal age filters must be calculated relative to fixed intake benchmark dates rather than real-time application submission dates¹. MEXT tracks (IDs 81, 82, 83) set strict age cutoffs based on birthdates on or after April 2, 2002²⁹. Similarly, GKS Undergraduate (ID 65) requires candidates to be under 25 years of age as of the intake year¹⁸. Evaluating user birthdates dynamically against these intake thresholds ensures exact temporal eligibility alignment across the platform¹.
