

Canonical Scholarship Verification Report: UniFAST and CHED Priority Programs

Systemic verification of higher education funding programs requires rigorous alignment with Tier 1 primary evidence, including government decrees, joint memorandum circulars, and official provider guidelines. Operational scholarship matching engines depend on deterministic validation to eliminate false-positive recommendations that misdirect applicants and false-negative omissions that suppress viable funding opportunities.

This canonical verification audit evaluates five higher education financial assistance programs administered by the Commission on Higher Education (CHED) and the Unified Student Financial Assistance System for Tertiary Education (UniFAST): the Tulong Dunong Program (ID 5), the Tertiary Education Subsidy (ID 66), the SIDA Scholarship Grant Program (ID 118), the Estatistikolar Program (ID 119), and the SIKAP Faculty Grant (ID 120).

13. Matching Risks

- Target User Misclassification Risk: In the production database, ID 120 lists levels: ["Graduate", "Faculty"]. If an engine presents this grant to general undergraduate or non-HEI graduate students, it creates false-positive matches. The engine must enforce `user.is_hei_employee == true`.
- Institution Type Validation: Applicants must be enrolled in recognized Delivering HEIs (DHEIs) rather than standard HEIs.

Systemic Matching Architecture & Production Database Directives

Analysis of governing policy guidelines across CHED and UniFAST reveals underlying structural patterns that dictate production schema design. Higher education funding in the Philippines relies heavily on sectoral certifications and institutional accreditations. Standard filter pipelines based solely on GWA and income are inadequate for preventing false recommendations.

Multi-Stage Engine Matching Pipeline Architecture

To enforce canonical accuracy, the matching engine routes student profile vectors through a three-stage sequential filtering pipeline:

Pipeline Stage	Evaluated Parameters	Operational Logic & System Actions
Stage 1: Hard Level & Temporal Filtering	education_level, eligible_year_levels, incoming_year_only, requires_current_enrollment	Evaluates whether applicant year_level is contained within eligible_year_levels. Enforces earned_college_units == 0 when incoming_year_only is true, and verifies enrollment status against program mandates.
Stage 2: Quantitative & Socioeconomic Bounds	minimum_gwa, renewal_gwa, income_limit, rank_cutoff_alternative	Validates applicant GWA against minimum_gwa and family income against income_limit. Implements dynamic branching for dual-GWA programs (such as Estatistikolar ID 119), applying an 85.00% threshold for incoming freshmen and an 80.00% threshold for upperclassmen.
Stage 3: Institutional, Sectoral & Course Matching	school_type, priority_courses, degree_program_restricted, sectoral_restriction	Matches institutional eligibility (SUC, LUC, Private COPC, or DHEI). Verifies degree program codes against restricted lists (e.g., BS Statistics for ID 119) and validates sectoral credentials (such as SRA certification for ID 118 or HEI employment for ID 120).

Systemic Directives and Production Database Updates

Secondary and third-order policy analysis demonstrates three vital structural requirements for database engineering:

1. **Sectoral Grants Depend on External Agency Registries:** Programs such as SIDA-SGP (ID 118) require verification against external government agency rosters (Sugar Regulatory Administration mill district rosters). Production databases must store explicit sectoral tags (sectoral_restriction) to avoid qualifying general agriculture students based solely on course title.
2. **Dual-GWA Architectures Require Temporal Evaluation:** Programs like Estatistikolar (ID 119) enforce distinct GWA thresholds depending on academic standing: 85.00% for incoming Grade 12 graduates and 80.00% for ongoing 2nd to 4th-year college students. Engine logic must branch dynamically based on user.year_level rather than evaluating a single static GWA column.
3. **Institutional Capacity Tags Prevent Disqualification:** SIKAP (ID 120) requires enrollment in designated Delivering Higher Education Institutions (DHEIs), whereas TDP (ID 5) requires COPC accreditation. Production matching algorithms must validate

school.accreditation_tags against scholarship requirements prior to output generation. Executing these database structural updates aligns the production system with canonical mandates, eliminating matching errors and delivering reliable recommendations to Filipino applicants.
